

Incred-A-Shred Adds to Fleet with Fuel-Efficient Shredding Truck

Baltimore, MD June 2, 2009 -- Incred-A-Shred, the Mid-Atlantic's rapidly growing document destruction company, purchased a new, fuel efficient shredding truck. The acquisition of the Shred-Tech MDS-26GT is another example by Incred-A-Shred to continue to show its focus on environmental responsibility and exceptional customer service.

The MDS-26GT meets the EPA's strict new low emissions standards and operates on ULSD (ultra-low sulfur diesel fuel) or B5 Biodiesel fuel. The MDS-26GT is also equipped with Shred-Tech's Predictive Idle with auto shutdown and remote panel start/stop. Predictive Idle senses low shredder loads and shuts off the high engine idle when the shredder is unattended and the hopper is empty. Moments later the PTO's are turned off along with the engine. This means never wasting fuel and engine hours.

The newest edition to the Incred-A-Shred fleet allows the ability to maneuver tight streets in compact, urban areas. It also allows for service to more rural routes due to its increased fuel economy.

"As our organization continues to grow, we have never lost focus on delivering exceptional customer service to our clients," said Incred-A-Shred's Jeff Rupp. "This focus has allowed us to continue to add to our fleet and grow our sales each and every month, despite the slumping economy."

"Our newest addition to our fleet will allow us to continue to grow our urban Baltimore and Washington, DC markets and our routes that are more rural in nature," Rupp added.

About Incred-A-Shred

Incred-A-Shred is an independently owned and operated on-site document and media destruction company. They are headquartered in Baltimore. They have a fleet of mobile shredding units that service the state of Pennsylvania, Maryland, Delaware, Virginia, and Washington, D.C. They service commercial, government, and residential customers.
